Notes: Robust standard errors are in parentheses. Statistical significance is indicated as *** p<0.01, ** p<0.05, * p<0.1. The dependent variable is Total ArrivalIDPs in columns 1 and 2 and Round-wise change in Arrival IDPs in columns 3 and 4. The independent variable is HUMDelivered. Columns 1 and 3 show models without round fixed effects, while Columns 2 and 4 include them. All models use Settlement Fixed Effects and cluster standard errors at the SettlementID level. The estimates are obtained using the STATA's reghdfe command.
